

COMPATIBILITY - DX8000 vs. DX8100

QUESTION

If you have a DX8000 as the master unit and add a DX8100 to the configuration, will you be able to view/control the system with the DX8000?

ANSWER

No, the DX8100 needs to be configured as the master unit and the DX8000 needs to be reconfigured as a client. See the following illustration for view/control compatibility when using a DX8000 with a DX8100.
